

# Planet Iron

## 13%

## Iron (Fe) 13% Chelated Fulvic Acid

### ADVANTAGES

- Fast treatment for iron deficiency symptoms, as it contains 13% iron. It is a component responsible for producing energy in the plant. It helps complete all the biological processes and improve plant growth. It also helps in the formation of chlorophyll inside the plant and therefore, leads to significantly increased vegetative growth.
- Contributes to biological process such as oxidation and photosynthesis.
- Treating iron deficiency that causes plant yellowing and dysfunction of biological processes inside the plant.
- Helps with absorption of and benefiting from other nutrients, because it is responsible for producing the energy necessary for the absorption process.
- Increases the yield and improves the quality of fruits.
- Fully soluble in water and provides plant with chelated iron element.
- Strong factor in the formation of chlorophyll and is important for treating yellowing that results from iron deficiency.
- Plays a very important role in the photosynthesis process.

#### Fulvic acid as a chelated substance:

- Chelated substance that helps in chelating nutrients in soil.
- Provides micro chelated elements in soil (iron).
- Provides calcium element Ca ++.
- Provides phosphorus element.
- Provides magnesium element.
- Transforms aforementioned elements to a simpler form, that can be easily absorbed and used.

### ACTIVE INGREDIENTS

- Iron (Fe) 13% (Chelated Fulvic Acid)

### DOSAGE AND USE

#### Field crops - Ornamental plants - vegetables

- 1 - 1.25 kg/Feddan treatment is repeated when necessary, from 1 - 2 times.

#### Fruit trees

- 1.25 - 3 kg/Feddan treatment is repeated when necessary, from 3 - 4 times.

#### Citrus and citrus fruits

- 3 kg/Feddan treatment is repeated when necessary, from 2 - 4 times.
